**1.6 IT Session**

1. Confirm or create GitHub logins.
2. Create a data warehouse project structure on their local system.
3. Upload your first SQL file and project structure to their GitHub repository.
4. Take four screenshots of your setup:
   o the root directory in GitHub

   o the course is set up on a system of their choice

o the SQL file in GitHub

o   your security settings are private and have added the instructor and reader grader
